Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-543-681A-5886

Sequence 5886, Application US/09543681A

Patent No. 6665709

GENERAL INFORMATION

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL

TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: DATE: 2000-04-05

CURRENT APPLICATION NUMBER: US 60/128,706

PRIOR FILING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 8344

SEQ ID NO 5886

LENGTH: 525

TYPE: PRT

CRANISM: Proteus mirabilis

US-09-543-681A-5886
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENERAL INVERNATION:
APPLICANT: Gary L. Breton et al.

NADH2 dehydrogenase (ubiquinone) (EC 1.6.5.3) chain 5 - dog mitochondrion

C,Species: mitochondrion Canis luque familiaris (dog)

C,Date: 16-Uul-1999 #sequence_revision 16-Uul-1999 #text_change 03-Uun-2002

C,Accession: T11503

R,Kim, K.S.; Lee, S.E.; Jeong, H.W.; Ha, J.H.

Mol. Phylogenet. Evol. 10, 210-220, 1998

A,Fitle: The complete nucleotide sequence of the domestic dog (Canis familiaris) mitochc

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

young men. Cardiac conduction defects and neurological defects have also been described, resulting in optic nerve degeneration and cardiac dysrbythmia.

SIMILARITY: Belongs to the complex I subunit 5 family.
                                                                                                                                                                                                                                                                                                EMBL, J01415, AABS8953.1, --

-I- CATALYTIC ACTIVITY: NaDH + ubiquinone = NAD(+) + ubiquinol.

-I- SUBCELLUIAR LOCATION: Integral membrane protein, mitochondrial

inner membrane (By similarity).

-I- SIMILARITY: Belongs to the complex I subunit 5 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Sequence 21346, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196-136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
